🌐 linkedin.com/in/dayron-alexis-díaz-rodríguez

Software Engineer building production web applications end to end — architecture, interface, database and deployment — remotely and asynchronously, owning each project from the first design review to production support. I turn a client problem into a product they can run without me: a shop that maintains its own catalogue, a portfolio scoring 100 on accessibility, an API documented from its own schemas.

PROFESSIONAL EXPERIENCE

Software Engineer (Full-Stack) — Xlynx LLC Remote · September 2025 – Present

- Delivered five client projects in twelve months, owning each from the first design review to production support.
- Cut page weight by 81% on a client storefront (3.3 MB to 0.6 MB) by isolating the single unoptimised asset, measured with Lighthouse before and after the change.
- Built SEO-ready frontends in Astro and Next.js with Tailwind CSS over Supabase and PostgreSQL, and integrated WordPress as a headless CMS so clients keep editing their own content.
- Established code review, CI/CD workflows and deployments on GitHub and Vercel, turning releases into routine instead of an event.

Freelance Software Engineer — Destinos Únicos — gift shop Havana · June 2025 – April 2026

- Grew a static landing page into a working storefront: catalogue filtered by occasion and ordering over WhatsApp, matching how the shop already sold instead of imposing a checkout.
- Removed the shop’s dependency on a developer by shipping a private admin area — create, edit, replace a photograph, withdraw a gift — secured with Supabase Auth and access checks that run before the page renders.

Freelance Software Engineer — Delicias Yordan — food delivery Holguín · August – October 2025

- Shipped the landing page and interactive menu that moved a local delivery business onto mobile, owning design, development, image optimisation and deployment alone.

SELECTED PROJECTS

Keily Mar — Photography portfolio

🌐 keilymargallery-sage.vercel.app · </> daxhoDev/keilys-portfolio

Bilingual portfolio in Astro scoring 99 / 100 / 100 on Lighthouse performance, accessibility and best practices, with zero axe violations across its seven routes. Shipped with no UI framework: filters, language switch and a hand-written 3 KB lightbox are plain TypeScript, under 30 KB of JavaScript.

Survey System — employee survey API

</> daxhoDev/survey-system

REST API in Express and TypeScript with Prisma over PostgreSQL, layered into controllers, services and repositories so business rules stay testable. JWT with refresh tokens, OpenAPI generated from the Zod schemas so types, validation and documentation cannot drift apart, rate limiting and soft deletes.

Destinos Únicos — storefront and admin

🌐 destinos-unicos.vercel.app · </> daxhoDev/destinos-unicos-landing-page

Next.js App Router with server components, Supabase for data and authentication, Cloudinary for media. In production since 2025 and maintained by the client herself since the admin area shipped.

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · SQL
Frontend	React · Next.js · Astro · Tailwind CSS · accessibility (WCAG 2.1 AA) · web performance
Backend and data	Node.js · Express · Django · PostgreSQL · Supabase · MongoDB · Prisma · WordPress · Strapi
Architecture	Layered APIs · REST and OpenAPI · schema-driven validation · design systems · spec-driven development
AI-assisted engineering	Coding agents in the daily workflow · agent-driven specs, reviews and test suites · prompt and context design
Quality and delivery	Playwright · Vitest · Lighthouse and axe audits · Git · GitHub Actions · CI/CD · Docker · Vercel

EDUCATION

Computer Engineering — University of Holguín 2022 – January 2027 (expected)

CERTIFICATIONS AND LANGUAGES

Frontend Developer (React) — HackerRank	📄 <u>verified certificate</u>
Spanish	native
English	upper-intermediate (B2/C1, self-assessed)
