linkedin.com/in/dayron-alexis-díaz-rodríguez-4707a633a

Full-Stack Developer at Xlynx LLC and final-year Computer Engineering student at the University of Holguín. I build web applications end to end — interface, database and deployment — and I ship them: five projects delivered in the past year, plus paid freelance work that clients keep running on their own.

EXPERIENCE

Full-Stack Developer — Xlynx LLC Remote · September 2025 – Present

- Five projects delivered in a year, from the first design review to production support.
- Frontends in Astro and Next.js with Tailwind CSS; data and authentication on Supabase and PostgreSQL; WordPress as a headless CMS where the client had to keep editing the content.
- Code review, CI/CD workflows and deployments on GitHub and Vercel.

Freelance Developer — Destinos Únicos — gift shop Havana · June 2025 – April 2026

- Started as a landing page with a static catalogue and grew into a full product: redesign, catalogue filtered by occasion, ordering through WhatsApp — which is how the shop actually sells — and photographs served through Cloudinary at 44–53 KB each.
- Built the private area the shop uses to keep its own catalogue — create, edit, replace the photograph or withdraw a gift without deleting it — behind Supabase Auth, with route protection checked before the page renders.

Freelance Developer — Delicias Yordan — food delivery Holguín · August – October 2025

- Landing page and interactive menu for a local delivery business in Next.js and Tailwind CSS, alone from design to deployment, with the ordering flow as the single measure of whether it worked.

SELECTED PROJECTS

Keily Mar — Photography portfolio

keilymargallery-sage.vercel.app · github.com/daxhoDev/keilys-portfolio

Bilingual portfolio in Astro with no UI framework: the filters, the language switch and a hand-written 3 KB lightbox are plain TypeScript. Under 30 KB of JavaScript on the landing page. Lighthouse 99 performance, 100 accessibility, 100 best practices, with zero axe violations across its seven routes.

Survey System — employee survey API

github.com/daxhoDev/survey-system

Express and TypeScript API with Prisma over PostgreSQL, layered as controllers, services and repositories. JWT authentication with refresh tokens in their own table, OpenAPI generated from the Zod schemas so types, validation and documentation share one source, rate limiting, soft deletes and a Dockerfile.

Destinos Únicos — shop and admin

destinos-unicos.vercel.app · github.com/daxhoDev/destinos-unicos-landing-page

Next.js App Router with server components, Supabase for data and authentication, Cloudinary for the photographs. The client has been maintaining her own catalogue since the admin area shipped.

SKILLS

Languages	TypeScript · JavaScript · SQL
Frontend	React · Next.js · Astro · Tailwind CSS
Backend and data	Node.js · Express · Django · PostgreSQL · Supabase · MongoDB · Prisma · WordPress · Strapi
Quality and infrastructure	Playwright · Vitest · Git · GitHub Actions · Docker · Vercel · Cloudinary

EDUCATION

Computer Engineering — University of Holguín 2022 – January 2027 (expected)

CERTIFICATIONS AND LANGUAGES

Frontend Developer (React) — HackerRank	<u>verified certificate</u>
Spanish	native
English	upper-intermediate (B2/C1, self-assessed)
